Subject: Prey Base Study

It appears there is still some misunderstanding as to what is being mitigated by the prey base study. Charles will be meeting with Chris Colt tomorrow (Wednesday) afternoon to reach an agreement. At that time DWR will give us a letter as to what the mitigation is for and I will send to a letter detailing our plans and attach a copy of the DWR letter to it.

At this point we are still going to start collecting the fauna material from the nests on Thursday. After an agreement is reached with DWR we will send the material to Paul Collins with the Santa Barbara Museum to be analyzed. He will then prepare a report describing the feeding habits of the raptors for last year.
